

APG-2

ARC-2

BUSCH PROTECTIVE'S LATEST DEVELOPMENT WITHIN THE ANTI-RIOT HELMET RANGE

This durable lightweight non-ballistic helmet platform is designed with the user in mind offering a high level of protection and comfort when operating in hostile conditions.

The ARC-2 composite shell made of reinforced glass fibre duromer which gives it a high level of multi-impact protection. This combined with our latest Comfort Protection Pad (CPP) suspension system offers multi-impact shock capability. This 3 stage impact management system is further designed to offer good ventilation and comfort which are key to long operations. Our retention system uses wheel dial technology making it easy to operate with one hand and provides for a secure and snug fit.

Functionality is what we bring! Our multi-function side-rail gives the user the capability to accommodate various devices (cameras, strobes, face-masks etc). This unique capability is a 1st within the field of Anti-Riot helmets. Cameras situated on the helmet will capture the image wherever the officer is facing, as opposed to a body camera which is static unless you move your torso, which situationally might not be very practical. The added ability to put on your face mask without removing your helmet will keep you protected at all times and speed up the masking process significantly. Whether you are involved in riot control or protester removal tasks our ARC-2 will ensure that you are PROtected from start to finish.
